1927

A faint, large watermark-like image of classical architecture is visible in the background. It features a series of four tall, fluted columns supporting a horizontal entablature. Above the entablature, there are decorative moldings and a low relief of a classical scene. The entire watermark is rendered in a light beige or cream color, blending with the paper texture.

CONDITIONS OF SALE

ALL BIDS TO BE PER LOT AS NUMBERED IN THE CATALOGUE.

The highest bidder to be the buyer. In all cases of disputed bids the decision of the Auctioneer shall be final.

Buyers to give their names and addresses and to make such cash payments on account as may be required, in default of which the lots purchased shall be resold immediately.

Purchases to be removed at the buyer's expense and risk within twenty-four hours from the conclusion of the sale, and the remainder of the purchase money to be paid on or before delivery, in default of which The Anderson Galleries, Incorporated, will not be responsible for any loss or damage whatever, but the lot or lots will be left at the sole risk of the purchaser, and subject to storage charges.

All lots will be placed on public exhibition before the date of sale, for examination by intending purchasers, and The Anderson Galleries, Incorporated, will not be responsible for the correctness of the description, authenticity, genuineness, or for any defect or fault in or concerning any lot, and makes no warranty whatever, but will sell each lot exactly as it is, WITHOUT RE COURSE.

If accounts are not paid and purchases removed within twenty-four hours of the conclusion of the sale, or, in the case of absent buyers, when bills are rendered, any sum deposited as part payment shall be forfeited, and The Anderson Galleries, Incorporated, reserves the right to resell the lot or lots by either private or public sale, without further notice, and if any deficiency arises from such resale it shall be made good by the defaulter, together with all expenses incurred. This condition shall be without prejudice to the right of this Company to enforce the sale contract and collect the amount due without such resale, at its own option.

The Anderson Galleries, Incorporated, will afford every facility for the employment of carriers and packers by the purchasers, but will not be responsible for any damage arising from the acts of such carriers and packers.

The Anderson Galleries makes no charge for executing orders for its customers and uses all bids competitively, buying at the lowest price permitted by other bids.

CATALOGUES ON REQUEST

SALES CONDUCTED BY MR. F. A. CHAPMAN, MR. A. N. BADE AND MR. E. H. L. THOMPSON

EVER since 1580, when Count Ferdinand of Tyrol became the first collector of arms and armour in the modern sense of the word by assembling at his castle of Ambras, two miles from Innsbruck, the magnificent creations of the early armourers' art, and by publishing the first catalogue raisonné of its kind, the reigning princes of Europe have considered the ownership of a fine "Armeria" an indispensable prerogative. Great noblemen, and in due course the modern princes of commerce and industry, have tried to emulate their example; and we thus find, besides the incomparable collections at Vienna, Dresden, Madrid, Windsor, and in the Wallace Collection at Hertford House and the Metropolitan Museum of New York, a number of private collections of singular importance both abroad and in America.

The example of Ambras doubtless had its inspiring influence on the development by another Habsburg prince—the Archduke Eugen—of the Armoury at Hohenwerfen.

This fortress of Hohenwerfen, placed on an inaccessible peak and dominating some of the vital routes from the Rhineland to the Orient and from the North to the Adriatic, was from the eleventh century the watchtower of the ambitious and militant Prince-Archbishops of Salzburg—the most beautifully situated town in the old Empire, lying in the lovely valley between the Mönchsberg and Capuzinerberg hills, with the Salzach flowing by, and the magnificent background of the Salzburg Alps. It is interesting to note, in connection with the present collection, that it was Rudolf of Habsburg, the founder of the imperial house, who made the archbishops princes of the Empire. Their importance and wealth, increasing from the time of Charlemagne, were greatest during the sixteenth century, when Italian architects remodelled the Gothic fortress into the lofty terraced structure of to-day.

The armoury of the castle was mainly filled with working armour and weapons for the daily needs of the garrison, in constant strife with turbulent outlaw gentry, partisans of the hostile Bavarian Elector, and the desperate rebellious peasantry. The character of the arms and armour, early weapons and firearms, was for the most part of a type rugged and powerful enough to withstand the severe test of mountain warfare. Gold armour probably never showed its arrogant splendour on the steep ramparts of the archiepiscopal fortress. The most elaborate object found at Hohen-

werfen was the splendid croupière, Number 1071, of the time of Archbishop Matthew Lang von Wellenburg (1519-1540), enriched with a sunburst of gold. Even under the lavish Wolf Dietrich (1559-1617), who craved Florentine splendour, parade armour doubtless remained at the archiepiscopal palace at Salzburg.

When Archduke Eugen took possession of the Fortress Hohenwerfen in 1898, he restored and replenished the three galleries of the armoury and replaced the loot of the Bavarian soldiery in the most expert manner. No doubt he inherited his affection for arms and armour, through the centuries, from his ancestor of many interests and activities, the Emperor Maximilian I.

The characteristic arms of the Maximilian and pre-Maximilian periods found at Hohenwerfen are a considerable number of polearms and crossbows. To these Archduke Eugen added fine examples in a splendid state of preservation from the Freudenthal Armoury of the ancient Order of the Teutonic Knights, of which he is a Grandmaster.

The contents of the armoury (over 2,000 individual items) can be divided into two main groups: arms and armour, and firearms.

The first group comprises seventeen suits of armour—complete, three-quarter and half suits—of the fifteenth and sixteenth centuries, including the work of Augsburg and Nürnberg. The fluted Maximilian suit, Number 891, with helmet, is of stellar importance. Splendid helmets are the Italian cabasses, Numbers 1057 and 1058; the closed Maximilian engraved helmet, Number 1083; the closed tilting helmet, Number 1120, justly attributed to Anton Pfeffenhauser of Augsburg; and a collection of morions of exceptional interest, exhausting every known type, and including a superbly engraved Italian example, Number 819.

The polearms are of the most varied pattern, and comprise many early and rare Gothic examples, with the richly engraved State partisans and halberds of the Salzburg Archbishops—Numbers 1072, 1073, 1074, 1075, and others.

In striking contrast with these parade weapons is a collection of arms illustrating the inventive ingenuity of the peasantry. The crossbows are represented by a number of early types in fine state, including a full-size windlass bow, Number 1047, and the Saxon bow, Number 1046, richly inlaid and with its original winder. Among the shields are Gothic pavises, Swiss and Hungarian, and two Venetian polychromed round shields of the Archiepiscopal Guard, Numbers 1050 and 1051. The very complete collection of musketeers' armour, with important contributions obtained by Archduke Eugen from the Museum at Emden, includes an array of lobster-tail pot helmets closely akin to the late Elizabethan and early Jacobean headgear of England.

The history of firearms, from the early hand cannon through the match-lock, wheel-lock and snaphaunce to flintlock and percussion, with all its transitions, is copiously illustrated, both technically and decoratively, with examples such as the magnificent pair of Dresden wheel-lock dags with the armorial bearings of the Elector of Saxony, Number 1096; the Spanish snaphaunce pistols by Torrent, Number 1099; and wheel-lock arquebuses inlaid with gold, silver and bone, and carved with hunting scenes, arabesques and portraits.

The development of the cannon from the Maximilian era is shown by early demi-culverins, field cannon, princely model cannon, of which one bears the arms of Alphonsius, Duke of Este, father of James II's Queen, Mary of Modena (Number 578); and by the great eighteenth century cannon of the Spanish man-of-war *El Asiano*, Number 1022, and of the French frigate *La Frivole*, Number 1021.

The collector will find endless enjoyment in the large number of small objects of armorial interest, vieing in rarity with the more outstanding examples.

Archduke Eugen, himself an able student of the history and art of arms, was before the new order in supreme control of the Austrian and Hungarian museums and enjoyed the advice of the expert caretakers of the Ambras collection. The replacement of missing parts, the restorations found necessary, were therefore executed by the most skilful craftsmen of their time.

An important factor in the acquisition of many rare examples was the close relationship of Archduke Eugen to the royal family of Spain—his sister is the mother of King Alfonso. The Archduke is the great-great-grandson in direct male descent of the famous Marie Theresa, mother of two emperors and of Marie Antoinette, Queen of France. The late Emperor Franz Josef was his second cousin.

The appreciation of armour in America, the understanding of the historical, artistic, technical and romantic interest, has been brought to the attention of an increasingly large public by the efforts of Dr. Bashford Dean, to whom every lover of armour owes a debt of gratitude.

This catalogue has been compiled by the Austrian experts, Baron Oswald Pothier des Echelles and Dr. Julius Scheurer, and comprises a close translation of their descriptions.

It is to be particularly noted that every object in this catalogue was removed from The Armoury, Fortress Hohenwerfen, near Salzburg, Austria, during December, 1926, by order of H. I. & R. H. Archduke Eugen.

NUMBERS 597-601

597 HOLY WATER SPRINKLER

15TH CENTURY

On a wooden shaft 170 cm. long, which swells into a large sphere at the top; this is armed with fifteen quadrangular spikes of wrought iron (one missing); a spike 20 cm. long rises from the top of the sphere. Four side-straps of iron extend down the shaft.

60-

The strange name of Holy Water Sprinkler was given to these savage arms by the grimly humorous peasants of the time. They were so styled from the way in which their spikes caused the blood to spurt out. Another theory explains that the Church, unable to use the sword, had recourse to various kinds of maces.

Vide Laking, Vol. III, p. 124.
